Many people believe that passion and commitment are the foundations of strong romantic relationships. But a relationship is made of two 21 individuals. And the personality trait these individuals 22 or lack can often make a relationship more — or less — likely to 23. Recent research has found that one trait in particular — humility — is an important indicator of successful relationships.

Humility can sometimes be 24 with a lack of confidence. But researchers have come to realize that being humble generally indicates the 25 of deeply admirable personal qualities. Being humble means you have the ability to accurately 26 your deficiencies without denying your skills and strengths. For example, you might recognize that you are intelligent, but realize that you are not a 27. Thus, humility leads to an honest view of one's own advantages and shortcomings. Humble people do not ignore, avoid, or try to deny their limits or deficiencies. They can 28 mistakes, see value in things that are far from perfect and identify areas for improvement.

Perhaps it is not 29, then, that humility appears to be a huge asset to relationships. One study found that people tend to rate this quality 30 in their spouse. The study also found that someone who is humble is more likely to initiate a romantic relationship, perhaps they are less likely to see themselves as “too good” for someone else. Thus, a humble partner might be your ideal partner.

此部分答案请在答题卡上填涂，写在本试卷上无效。

Directions: *There are 2 passages in this part. Each passage is followed by some questions. For each of them there are four choices marked [A], [B], [C] and [D]. You should decide on the best choice and mark the corresponding letter on the Answer Sheet with a single line through the centre.*

Passage One

Questions 31 to 35 are based on the following passage.

With obesity now affecting 29% of the population in England, and expected to rise to 35% by 2030, should we now recognize it as a disease? Obesity, in which excess body fat has accumulated to such an extent that health may be adversely affected, meets the dictionary definition of disease, argues Professor John Wilding. He points out that more than 200 genes influence weight. "Thus body weight is strongly influenced by biology — it is not an individual's fault if they develop obesity." Yet the widespread view is that obesity is self-induced and that it is entirely the individual's responsibility to do something about it. Recognising obesity as a chronic disease with severe complications rather than a lifestyle choice "should help reduce the *stigma* (耻辱) and discrimination experienced by many people with obesity," he adds.

Professor Wilding disagrees that labelling a high proportion of the population as having a disease removes personal responsibility or may overwhelm health services, pointing out that other common diseases, such as high blood pressure and diabetes, require people to take action to manage their condition. He suggests that most people with obesity will eventually develop complications. "But unless we accept that obesity is a disease, we are not going to be able to tackle it," he concludes.

But Dr. Richard Pile, a physician with a special interest in diabetes, argues that adopting this approach "could actually result in worse outcomes for individuals and society." He believes that the dictionary definition of disease "is so vague that we can classify almost anything as a disease" and says the question is not whether we can, but

whether we should, and to what end.

If labelling obesity as a disease was harmless then it wouldn't really matter, he writes. But labelling obesity as a disease "risks reducing autonomy, disempowering and robbing people of the intrinsic motivation that is such an important enabler of change." What's more, making obesity a disease "may not benefit patients, but it will benefit healthcare providers and the *pharmaceutical* (制药的) industry when health insurance and clinical guidelines promote treatment with drug and surgery," he warns.

(358 words)

31. What does Professor John Wilding argue about obesity?
- [A] Its impact on society is expected to rise.
 - [B] It is now too widespread to be neglected.
 - [C] It should be regarded as a genetic disease.
 - [D] Its dictionary definition should be updated.
32. What is the popular view of obesity?
- [A] It is difficult to define.
 - [B] It is a modern disease.
 - [C] It has much to do with one's genes.
 - [D] It results from a lack of self-control.
33. Why are some people opposed to labelling obesity as a disease?
- [A] Obese people would not feel responsible to take any action.
 - [B] Obese people would not be able to afford the medical costs.
 - [C] Obese people would be overwhelmed with anxiety.
 - [D] Obese people would be discriminated against.
34. What does Dr. Richard Pile think of the dictionary definition of disease?
- [A] It is of no use in understanding obesity.
 - [B] It is too inclusive and thus lacks clarity.
 - [C] It helps little to solve patients' problems.
 - [D] It matters little to the debate over obesity.
35. What is Dr. Richard Pile's concern about classifying obesity as a disease?
- [A] It may affect obese people's quality of life.
 - [B] It may accelerate the spread of obesity.
 - [C] It may cause a shortage of doctors.

[D] It may do little good to patients.

Passage Two

Questions 36 to 40 are based on the following passage.

Boredom has become trendy. Studies point to how boredom is good for creativity and innovation, as well as mental health. It is found that people are more creative following the completion of a tedious task. When people are bored, they have an increase in “associative thought” — the process of making new connections between ideas, which is linked to innovative thinking. These studies are impressive, but in reality, the benefits of boredom may be related to having time to clear your mind, be quiet, or daydream.

In our stimulation-rich world, it seems unrealistic that boredom could occur at all. Yet, there are valid reasons boredom may feel so painful. As it turns out, boredom might signal the fact that you have a need that isn’t being met.

Our always-on world of social media may result in more connections, but they are superficial and can get in the way of building a real sense of belonging. Feeling bored may signal the desire for a greater sense of community and the feeling that you fit in with others around you. So take the step of joining an organization to build face-to-face relationships. You’ll find depth that you won’t get from your screen no matter how many likes you get on your post.

Similar to the need for belonging, bored people often report that they feel a limited sense of meaning. It’s a fundamental human need to have a larger purpose and to feel like we’re part of something bigger than ourselves. When people are bored, they’re more likely to feel less meaning in their lives. If you want to reduce boredom and increase your sense of meaning, seek work where you can make a unique contribution, or find a cause you can support with your time and talent.

If your definition of boredom is being quiet, mindful, and reflective, keep it up. But if you’re struggling with real boredom and the emptiness it provokes, consider whether you might seek new connections and more significant challenges. These are the things that will genuinely relieve boredom and make you more effective in the process.

(349 words)

36. What have studies found about boredom?

Directions: *For this part, you are allowed 20 minutes to translate the following passage from English into Chinese.*

Around this time last year, I used to think that the words “home” and “travel” went together like “black” and “white” or “night” and “day.” Put simply, they occupied opposite ends of the spatial spectrum. The notion of “home” took shape and form in everything that was familiar: in the promise of Sunday night dinners with my family; in the certainty that the lopsided tree I grew up with would always be right outside my bedroom window; and in the comfort that everything within a 100-mile radius of me was a world I could operate in. Anything beyond these boundaries belong to the realm of “travel” — a realm that, since childhood, I desperately wanted to explore.
